

Exterior Signage System

Keep Signage Looking Brand New

The maintenance and care of a painted or clear coated polyurethane surface would utilize the basic commercially available non-abrasive cleaners and polishes recommended for finishes exposed to the environment.

Suggested Signage Cleaning Tips

- Rinse all surfaces thoroughly with water before to loosen dirt and debris that could cause scratching
- Wash with a Diluted Mild Detergent
- Concentrate on one section at a time, washing and rinsing each area completely before moving on
- Dry using soft terry towels, air drying may leave watermarks
- Avoid use of lawn mowers, weed trimmers or other tools which can cause damage to signage (We suggest surrounding the posts with mulch or stone landscaping)

It is recommended to wait at least 30 days after painting before any cleaning or polishing is attempted. A mild detergent and water solution with soft cloth toweling is often sufficient to remove most dirt followed with a thorough clean water rinse. Application of polish (liquid or paste) should be done with a wet soft cloth covered sponge and buffed with a soft flannel cloth. This is best accomplished in the cooler hours of the day avoiding direct sunlight if possible. Use of polish over satin finishes may result in an increase to the gloss level.
